

Florist Quality Blooming Azaleas

Long Lasting Flowers!!

Florist azaleas will stay in bloom up to 8 weeks when properly cared for.

In areas with milder climates these azaleas can be grown outside within protected areas.

Azalea Care

Keep plants moist but not wet. Do not let plants dry out.

Avoid direct sunlight.

For best flower color and longer bloom time keep at normal room temperature.

1. Never allow plants to sit in standing water. This will significantly reduce the shelf life of the plant. We suggest that before a plant is watered, pick up the plant to gauge the weight and therefore get an idea how dry the plant is and if it needs water.
2. Azaleas, as with most plants, need to dry down a bit between being watered.
3. Avoid getting water on the leaves or flowers when watering plants.
4. Keep plants away from direct sunlight.
5. Do not store plants in the shipping cases. Remove immediately and place in a well ventilated area.
